**Recommendation Letter**

I have known Markela Leka since 2015; at the time, she was a starting undergrad student in the Program of Biomedical Science at Metropolitan College in Athens.

During the first two semesters of her studies, Markela attended the course of “Essential Chemistry” as a student of mine. The course covered basic concepts and applications of Chemistry and Biochemistry. She performed satisfactorily and her interest in learning was apparent. Markela demonstrated an active in-class participation throughout the year by asking questions and contributing to conversations. Additionally, she was eager to devote a significant amount of time in the study of the underlying theory.

During our interaction also in the personal level, I have observed that Markela has a character of integrity and self assurance. Undoubtedly, she is hard working, persistent and willing to help others.

I consider that a Master’s program would definitely contribute to Markela’s progress and would be a stepping stone to her scientific and professional development.

Please do not hesitate to contact me for any further information.

With kind regards,

Dr. Georgios Leonis  
Department of Biomedical Science  
Metropolitan College
