To Whom It May Concern:

I am writing this letter of recommendation on behalf of Rotem Sarig. As part of her Biotechnology engineering degree Rotem did a research project in my lab, the project title was: "Locating Alleles Responsible to Heat Conditions Tolerance in Recombinant Barley by Lab Methods and Statistical Analysis by ComSeq Algorithm". During this period she managed to acquire skills in genetic analysis of plants using PCR based molecular markers and high-throughput DNA extractions. She was also active in the phenotypic analysis of large set of plants, and communicated very well with other lab members. Rotem was very comfortable, hard working person and enthusiastic with catching up the molecular techniques and performing pilot and large-scale experiments in the lab, including arrangement of hundreds of plants required to these. Although her part of the work did not reach peer-reviewed publication yet she did summarize this project into a clear and concise report to the Ben-Gurion University and a presentation that were graded highly among peers in the program.

With all these above qualities I am confident that Rotem is a worthy candidate for advanced studies and I recommend him for further studies or lab work at your institute.

Sincerely,

Dr. Eyal Fridman
